

BUG TRACKING TEMPLATE

Database Query Performance Profiler (DQPP) • Jira • Detailed Step-by-Step Bug Tracking Record

Purpose	Document how defects are reported, prioritized, assigned, worked on, reviewed, resolved, and verified for the DQPP project.
Bug workflow	Open → In Progress → In Review → Resolved/Done
Core bug fields	Bug ID, summary, description, steps to reproduce, expected result, actual result, severity, priority, assignee, status, resolution, verification.
Evidence	Actual Jira screenshots should be inserted in the evidence areas. No fabricated screenshots are included.

Important: This document is a structured bug-tracking template for the DQPP Jira work. Where an actual defect has not been supplied, the example record below is explicitly marked as a **sample** and should be replaced with the actual bug from your Jira activity if your assignment requires real defect evidence.

1

STEP 1 — Open the Bug Tracking Project

Prepare the Jira project in which defects will be recorded.

#	ACTION
1	Open the existing Database Query Performance Profiler (DQPP) Jira project.
2	Confirm that you can create issues in the project.
3	Locate the issue-type selector used when creating a new issue.
4	Select Bug if the Bug issue type is available.
5	Open the bug-creation form and verify the fields required for reporting are available.

JIRA EVIDENCE

Show the DQPP Jira project and the Bug issue type / create-issue screen.

INSERT ACTUAL JIRA SCREENSHOT HERE

STEP 2 — Create a Bug Report

Create a defect record with enough information for another person to reproduce it.

#	ACTION
1	Click Create and choose the Bug issue type.
2	Enter a short, specific summary that describes the observable problem.
3	Write a description explaining where the defect occurs and what behavior is wrong.
4	Add the steps required to reproduce the issue in the correct order.
5	Record the expected result and the actual result separately.
6	Attach screenshots, logs, or other evidence when available.

JIRA EVIDENCE

Show the Jira Create Issue form populated with a bug report.

INSERT ACTUAL JIRA SCREENSHOT HERE

STEP 3 — Classify Severity and Priority

Separate the impact of a defect from how urgently it should be fixed.

#	ACTION
1	Severity describes the impact of the defect on the system or user.
2	Priority describes how urgently the team should address the defect.
3	Choose the values according to the project's available Jira options rather than inventing custom values.
4	Check that the chosen priority is consistent with the impact described in the bug.
5	Save the issue and verify the classification is visible on the bug.
Example classification	When it may be appropriate
Critical	System-breaking defect or severe failure of a core function.
High	Major functionality is significantly affected and needs prompt attention.
Medium	Important functionality is affected but a workaround may exist.
Low	Minor defect with limited impact.

JIRA EVIDENCE

Show the created bug with its Priority and other classification fields.

INSERT ACTUAL JIRA SCREENSHOT HERE

STEP 4 — Assign the Bug

Make ownership explicit so the defect has a person responsible for progressing it.

#	ACTION
1	Open the Assignee field on the bug.
2	Select the team member responsible for investigating/fixing the defect.
3	Confirm the assignee is displayed on the issue.
4	If your Jira project uses an unassigned state, do not assign the bug to a random person solely to fill the field.
5	Add a comment if additional context or handoff information is needed.

JIRA EVIDENCE

Show the bug issue with the Assignee field visible.

INSERT ACTUAL JIRA SCREENSHOT HERE

STEP 5 — Move the Bug to In Progress

Record the transition from a reported defect to an actively investigated/fixed defect.

#	ACTION
1	Open the bug from the project board or issue list.
2	Change its status from Open (or the project's equivalent initial status) to In Progress .
3	Begin investigation and reproduce the defect.
4	Identify the likely cause and implement the required correction.
5	Add a comment or work note when your Jira setup supports it.
6	Capture the issue after the status transition.

JIRA EVIDENCE

Show the bug in the In Progress state.

INSERT ACTUAL JIRA SCREENSHOT HERE

STEP 6 — Review and Test the Fix

Do not mark a defect complete merely because code was changed; verify the behavior.

#	ACTION
1	Move the bug to In Review when the implementation/fix is ready for checking.
2	Repeat the original reproduction steps.
3	Compare the observed result with the expected result.
4	Check that the correction does not introduce an obvious regression.
5	If the defect still exists, return the issue to In Progress .
6	If the defect is fixed, continue to the resolved/done state.

JIRA EVIDENCE

Show the bug in In Review or show evidence of the review/test result.

INSERT ACTUAL JIRA SCREENSHOT HERE

STEP 7 — Resolve / Complete the Bug

Close the defect only after the fix has been verified.

#	ACTION
1	Change the issue status to Resolved or Done , depending on the workflow available in your Jira project.
2	Select an appropriate resolution if Jira asks for one, such as Fixed.
3	Add a short resolution note describing what was corrected.
4	Verify that the bug is no longer shown as an active defect.
5	Capture the final issue state for submission evidence.

JIRA EVIDENCE

Show the completed/resolved bug with its final status and resolution.

INSERT ACTUAL JIRA SCREENSHOT HERE

STEP 8 — Bug Tracking Record — Sample Format

Use this table as the detailed record for an actual DQPP defect.

SAMPLE ONLY: The following record demonstrates the required structure. Replace it with an actual Jira bug if your assignment requires you to report a real defect discovered during your project work.

FIELD	SAMPLE VALUE
Bug ID	BUG-001
Project	Database Query Performance Profiler (DQPP)
Summary	Sample: Slow-query dashboard displays incorrect duration ordering
Description	Sample defect demonstrating how a dashboard display problem can be documented.
Steps to Reproduce	1. Open the slow-query dashboard. 2. Load multiple query records with different durations. 3. Sort by duration. 4. Observe the displayed order.
Expected Result	Queries should be ordered correctly according to duration.
Actual Result	Sample: One or more records appear in an incorrect order.
Severity	Medium — example only
Priority	Medium — example only
Status	Open → In Progress → In Review → Done
Resolution	Fixed — example only

STEP 9 — Bug Tracking Register

Maintain a compact view of defects so their ownership and status can be reviewed quickly.

BUG-001	Sample: Slow-query dashboard displays incorrect duration ordering	Medium*	Medium*	Actual assignee	Done*	Fixed*
BUG-002	Add actual bug from Jira here	—	—	—	—	—
BUG-003	Add actual bug from Jira here	—	—	—	—	—
BUG-004	Add actual bug from Jira here	—	—	—	—	—

* Sample values only. Replace with actual Jira data if required.

STEP 10 — Final Bug Tracking Board

Show defects grouped by their current state for quick visibility.

OPEN	IN PROGRESS	IN REVIEW	DONE / RESOLVED
BUG-002 Actual bug to be added	No items	No items	BUG-001 Sample bug — replace with actual Jira bug

JIRA EVIDENCE

Insert the actual final Jira bug-tracking board screenshot here.

INSERT ACTUAL JIRA SCREENSHOT HERE

STEP 11 — Bug Tracking Summary

Summarize what a complete defect-management process demonstrates.

AREA	WHAT THE TEMPLATE DEMONSTRATES
Reporting	A defect is documented with a clear summary, description, reproduction steps, expected result and actual result.
Classification	Severity and priority are recorded separately so impact and urgency are not confused.
Ownership	The bug is assigned to a responsible team member.
Workflow	The defect progresses from reporting through investigation, review/testing and resolution.
Verification	The original reproduction steps are repeated before the defect is considered fixed.
Visibility	A bug register and board make outstanding and completed defects easy to track.

Submission checklist: Replace sample bug values with actual Jira data if required; insert actual Jira screenshots; verify issue keys, statuses, priority, severity, assignee and resolution; then export the completed document as the final PDF.
